EDUCATION

University of California, Irvine **Sep 2024 - Jun 2028**
B.S., Computer Science

TECHNICAL SKILLS

Programming Languages: Python, C++, Java, TypeScript, JavaScript
Frameworks/Tools: Git, GitHub Actions, Docker, React, Node.JS, Drizzle
Cloud/Databases: AWS (Lambda, S3, API Gateway, Cognito, EventBridge, RDS), PostgreSQL, SQLite
Concepts: CI/CD, ETL, Version Control, Full Stack Development, Web Scraping, AI/LLM Integration, Data Pipelines, Event-Driven Architecture, REST APIs

EXPERIENCE

socalfurs.com **Mar 2026 - Present**
Full Stack Developer
Worked directly under the lead developer on a **production calendar automation platform used by 3,000+ people daily**, integrating Telegram, AI, PostgreSQL, and Google Calendar to automate community event publishing.

- Replaced polling-based Telegram checks with an **event-driven Telethon workflow**, improving responsiveness and reducing unnecessary processing.
- Optimized **Google Calendar API** duplicate-event detection by restricting queries to relevant date ranges, reducing unnecessary comparisons and avoiding **API pagination limits**.
- Built an **ETL-style data pipeline** using the **Gemini API** to transform unstructured Telegram announcements into **validated JSON** and load structured event data into **PostgreSQL**.
- Improved backend maintainability by **refactoring class architecture**, correcting constructor logic, and removing redundant processing across the codebase.
- Developed a full-stack **event management interface** using **React, TypeScript, Node.js, PostgreSQL, and Drizzle**, enabling organizers to create, view, and manage structured event data.

Krak Boba **Jul 2026 - Present**
Barista *Anaheim, California*
Reliable and customer-focused barista experienced in beverage preparation, inventory management, daily prep, and fast-paced customer service. Skilled at staying organized, supporting team operations, and helping ensure smooth and efficient store workflows.

- Prepared beverages and completed daily ingredient prep while maintaining product consistency and food-safety standards.
- Delivered customer service in a fast-paced environment by accurately taking orders, handling transactions, and addressing customer needs.
- Tracked and restocked inventory, identified low-stock items, and supported supply organization to prevent operational delays.

PROJECTS

Face Overlay Tracker (Computer Vision Project)

- Built a real-time face-tracking application that detects facial landmarks and anchors a PNG overlay to the user's face
- Implemented landmark-based positioning and scaling to ensure accurate alignment under varying head movements and lighting conditions.
- Developed expression-based logic to analyze facial landmark geometry and automatically switch overlays based on detected emotions.
